PROFESSIONAL SUMMARY

Data Science graduate with practical experience in **Machine Learning, Natural Language Processing, and Data Analytics** gained through academic projects and industry internship experience. Proficient in **Python, SQL, Deep Learning frameworks, and modern AI technologies**, with a strong track record of developing **predictive models, NLP applications, and full-stack data-driven solutions**. Adept at transforming complex data into actionable insights and eager to contribute to innovative AI and data science initiatives.

TECHNICAL SKILLS

Programming Languages : Python, SQL, R Programming, C Programming, HTML, LaTeX

Machine Learning | AI | Deep Learning : Scikit-learn, TensorFlow, PyTorch, Keras, SHAP, CNN, RNN, LSTM, Transformer models, LLMs, GPT-based models

Developer & Visualization Tools : Jupyter Notebook, R Studio, PythonAnywhere, Tableau, Power BI, Matplotlib, Seaborn

Data & Big Data : Numpy, Pandas, EDA, Hadoop, MongoDB

APIs & Version Control: FastAPI, REST API, API Integration, Git, GitHub

Frameworks & Platforms : Linux, Overleaf, Django

EDUCATION

Post Graduate Diploma Data Science, Central University of Tamil Nadu

2024 - 2025

Relevant Coursework: Machine Learning, Neural Networks, NLP, Data Visualization, Inferential Statistics, Big Data.

B.Sc. Mathematics, Kannur University

2020 - 2023

Relevant Coursework: Real Analysis, Abstract Algebra, Differential Equations, Inferential Statistics, Physics.

EXPERIENCE

NLP Intern

December 2024 - January 2025

NIT, Trichy

- Evaluated and ranked NLP classification models built on transformer architectures, utilizing few-shot and zero-shot learning to optimize accuracy and F1-scores.
- Experimented with NLP models for text classification and sentiment analysis.

PROJECTS

Hate Speech Detection in Malayalam

- Developed a Malayalam hate speech detection system using transformer models.
- Utilized few-shot and zero-shot learning techniques to handle low-resource language challenges and improve classification accuracy.

Customer Churn Prediction Analysis

- Designed and implemented a predictive model to identify customers likely to discontinue a service based on behavioral, transactional, and demographic data.
- Applied logistic regression and tree-based models to uncover key churn drivers.

Soccer Analytics – Player Position Prediction

- Built a machine learning pipeline to predict optimal player positions using match data and skill ratings.
- Used model outputs to derive tactical insights for coaching decisions and performance optimization.

Electro – Electronics Review Platform

- Designed and developed a full-stack web application using Python and Django framework enabling users to browse, filter, and review electronics products.
- Implemented Google OAuth 2.0 social authentication and email-based password reset using django-allauth and Gmail SMTP, improving user onboarding experience.

AI-Powered NL2SQL Engine – Automated Data Analytics Platform

- Developed a full-stack AI platform using Python, FastAPI, and Streamlit, integrating Google Gemini to instantly translate natural language into executable SQLite queries.
- Engineered an automated business intelligence pipeline featuring Plotly data visualization and a custom SQL validation firewall to prevent injection attacks and enforce read-only execution.

VIRTUAL EXPERIENCE & CERTIFICATION

- **Certificate in Python Programming with Django (8-Month Program)** | Entri Elevate Completed May 2026
- **Data Analytics Virtual Experience Participant** | Deloitte (via Forage)
