Professional Summary

Results-driven Data Scientist and AI enthusiast with strong expertise in **Python, SQL, MySQL, SQLite, Power BI, Tableau, Looker Studio, PyTorch, TensorFlow, OpenCV, YOLO, and Generative AI/LLMs**. Experienced in **data preprocessing, feature engineering, predictive modeling, NLP, computer vision, AI model development, and visualization**. Proven track record delivering end-to-end projects in **AI, Machine Learning, Deep Learning, NLP, computer vision, and business intelligence**. Currently based in the **UAE** and seeking **full-time or internship opportunities** in data science, AI, ML, analytics, or business intelligence roles.

Core Competencies

Machine Learning, Deep Learning, NLP, Computer Vision, Generative AI, Large Language Models (LLMs), Python, SQL, Tableau, Power BI, Looker Studio, AI Model Development, Data Analysis, Feature Engineering, SHAP, Model Explainability, ETL, Data Pipelines

Education

PG Diploma in Data Science , Central University of Tamil Nadu	<i>Jul 2024 – Jun 2025</i>
M.Sc. in Data Science (Online) , Chandigarh University	<i>Aug 2023 – Jul 2025</i>
B.Sc. in Mathematics , Calicut University	<i>Jun 2020 – May 2023</i>

Technical Skills

Programming Languages: Python, SQL, MySQL, SQLite, R, SPSS, Scala, HTML, CSS, JavaScript (JS), LaTeX, Jupyter Notebook

Machine Learning / AI / Deep Learning: Machine Learning, Deep Learning, Scikit-learn, TensorFlow, PyTorch, Keras, XGBoost, LightGBM, CatBoost, CNN, RNN, LSTM, GANs, Transformers, Generative AI, LLMs, GPT-based models, Transfer Learning, SHAP, Model Explainability

Natural Language Processing: TF-IDF, Word2Vec, GloVe, BERT, GPT, Tokenization, Stopwords, Stemming, Lemmatization, Text Summarization, Chatbots, Fine-tuning, Named Entity Recognition (NER)

Computer Vision: OpenCV, YOLOv8, Image Classification, Object Detection, Face Recognition, Image Segmentation, Data Augmentation

Visualization / BI: Tableau, Power BI, Looker Studio, Matplotlib, Seaborn, Excel (Pivot, VLOOKUP, INDEX-MATCH, Power Query), Streamlit, Gradio, Canva, Visme, Dashboards, Reporting

Data Engineering / Tools: ETL, Hadoop, MongoDB, API Integration, Docker, MLflow, Weights and Biases, Git, GitHub Actions, Azure, AWS, Google Colab, Data Pipelines

Analytics / Statistics: Hypothesis Testing, A/B Testing, Bayesian Statistics, Monte Carlo Simulations, Regression Diagnostics, Statistical Modeling, Model Evaluation Metrics

Concepts / Methodologies: ESG Reporting, Data Governance, Policy Compliance, Preprocessing, Feature Engineering, Exploratory Data Analysis (EDA), Classification, Regression, Time Series Forecasting, Hyperparameter Tuning, Cross-Validation, Ensemble Methods, PCA, t-SNE, UMAP

Certifications

- AWS for Data Science – Simplilearn
- Business Intelligence using Excel – Simplilearn
- Power BI for Beginners – Simplilearn
- SQL using MySQL –Scaler
- R Programming for Data Science – IBM Skillbuilder

Experience

ML Intern – Soccer Analytics, NIT Trichy

Dec 2024 – Jan 2025

- Built Random Forest model with SMOTE achieving **95% accuracy** for player position classification.
- Applied SHAP to provide interpretability and actionable insights.
- Contributed to **academic publication** on AI-driven player analytics.

Selected Projects

IPL Score Prediction – Python / ML

- Developed ensemble regression models (Random Forest, XGBoost) achieving **R2 score of 0.98**.
- Implemented real-time score forecasting and SHAP-based feature explainability.

Face Recognition – CNN / OpenCV / Python

- Designed CNN-based facial recognition system with high precision on multiclass dataset.
- Improved accuracy with data augmentation, dropout, and transfer learning.

YOLOv8 Object Detection – Python / CV

- Trained YOLOv8 model on logistics and safety datasets with 20+ object classes.
- Optimized precision and recall via hyperparameter tuning and GPU acceleration.

UAE Government Revenue Dashboard – Power BI / Python / ESG

- Built dashboards showing historical and predicted revenue trends.
- Designed KPIs and ESG-aligned insights for policy decisions.
- Applied Python forecasting, SPSS validation, and Power BI reporting for policy-level decisions.

Smart Lead Scoring App – Streamlit / Python

- Developed interactive lead scoring tool for B2B clients with real-time prioritization insights.

Resume Skill Extraction – Gradio / NLP

- Built NLP app extracting technical skills with **96% accuracy**, supporting ATS parsing.

News Summarizer + Fake News Detector – NLP / Python

- Transformer-based app performing summarization and fake/real classification (**98% accuracy**).

Hate Speech Detection – NLP / Python

- Classified code-mixed Malayalam-English text (**85% accuracy**) for content moderation.

Telco Customer Churn – Power BI / ML

- Built classification models and dashboards to monitor churn KPIs and retention strategies.

HR Analytics Dashboard – Tableau

- Visualized attrition, department trends, and income distributions to identify retention patterns.

Superstore Sales Forecasting – Looker Studio / Python

- Performed time-series forecasting improving accuracy by **15%**.

Zomato Data Analysis – SQL / Python

- SQL-based EDA and Python visualizations to uncover customer behavior and restaurant trends.

Research and Publications

AI in Libraries – Research Paper

- Explored AI-driven automation and inclusivity strategies in public libraries.
- Proposed frameworks for **digital equity and intelligent information access**.
